**Order Not Fetched
From Walmart**

Sometimes you might have faced this issue that your orders are not fetching from Walmart. There are some reasons because of which you can face this issue-

1. The sku for which order has been placed on Walmart , is not on our app. It may be that previously you have uploaded that particular sku from some other app. In this case create sku on your shopify store and sync it with our app.
2. It may be you are using some shipping provider, and your order is already fetched by them. We suggest, if you are using app for integration then please don't use any other third party. Completely integrate with us.
