**Products Are Not  
Uploading On  
Walmart**

**If your products are not uploading on Walmart then this may be because of some reasons-**

**1) If you have not perform attribute mapping then your products will be not uploaded.**

Attribute mapping is always required for variant products. For performing attribute mapping you just need to go **PRODUCTS** section and click on **ATTRIBUTE MAPPING**. From here you can perform attribute mapping.

**2) If you have not provide correct unique identifier i.e. Barcode, Walmart Tax code etc.**

In Walmart, it is mandatory that you provide correct and unique identifier to your products. Always remember that the barcode that you have provided to your products belong to the same category of your products. If you are providing bar code some other category products then it will mismatch the details on Walmart because Walmart recognize the category of product by that identifier and may be you will get order of some other products.

**3) Your description contains excessive words.**

Always remember the description of your product should not contain the extra content. Walmart have some parameter and your content must follow it.

**4) If you are not providing correct image URL.**

If you are not providing correct image URL, then in this case your product will also not upload on Walmart. So always give appropriate image URL to your products.
