**Products Are Not
Importing On APP**

If you are unable to import products on App then it will be because of only 2 reasons-

1. You have not provided the sku to your products.

Sku of the product doesn't contains any special symbol like @, #, \$, %, ^, &, *, (,). Sku only can contains Underscore(_) or Hyphen(-).

2. You have not provided the Product Type to your product.

Always provide the correct product type to your products, it simply means the Brand Name of your products.

Sometimes you have provided these 2 informations to your product, still you are not able to seeing your products on app. Then be sure that you have perform category mapping of your products. If you don't perform category mapping you would not be able to see your products on app.
